FIRE SEXPO

Building Firefighter Resilience with Fitness and Nutrition

Presented by:

Aaron Zamzow

Firefighter/Training Officer, City of Madison Fire Department

Owner- FireRescueFitness.com

Author- Firehouse Magazine, Lexipol, FR1

ORGANIZED BY:

ENDEAVOR BUSINESS MEDIA OFFICIAL MEDIA

FIREHOUSE

Who are you?

- Firefighters?
- Medics?
- Chiefs/ Captains?
- Trainers/ Doctors/ Athletic Trainers?
- Are you suffering from injuries/ aches/ pains?

Please ask questions...

Aaron Zamzow

- Firefighter and Training Officer for the City of Madison, WI Fire Department. Firefighter/ EMT for over 15 years.
- Certified (NASM, Ace Peer Fitness, NSCA CSCS, PN1) and degreed Personal Fitness Trainer with 25 years experience.
- Trained with elite athletes for the NBA, NHL, and NFL and had the privilege to study under some of the top trainers in the world.
- Owner of Fire Rescue Fitness
- Contributing Writer for Firehouse Magazine (Expo and World), Lexipol, FR1...
- Thank YOU! www.FireRescueFitness.com

What we want to learn today

- Introduction- Happy to be here!
- Session Overview- Why did we create this seminar.
- What is Inflammation
- What are the benefits of consistent exercise
- What are the benefits of proper nutrition
- What is Resilience
- What are the "best" steps to improve resilience
- Q and A

What are the health and fitness issues facing first responders?

- Heart attacks and strokes
 - Cancer
 - Obesity, diabetes
- Low T (low testosterone)
 - Sleep apnea
 - PTSD
 - Mental Health
 - Depression
- Musculoskeletal Injury **
 - Suicide

Responses to "Unmanaged" Stress

- Physical responses may include"
 - Fatigue
 - Extreme exhaustion
 - Headaches
 - Heartburn
 - Difficulty sleeping and nightmares
 - Digestion issues
 - Increased inflammation and joint pain

- Emotional and mental responses include:
 - Confusion
 - Anxiety
 - Depression
 - Anger and outrage
 - Feelings of helplessness
 - Substance Abuse

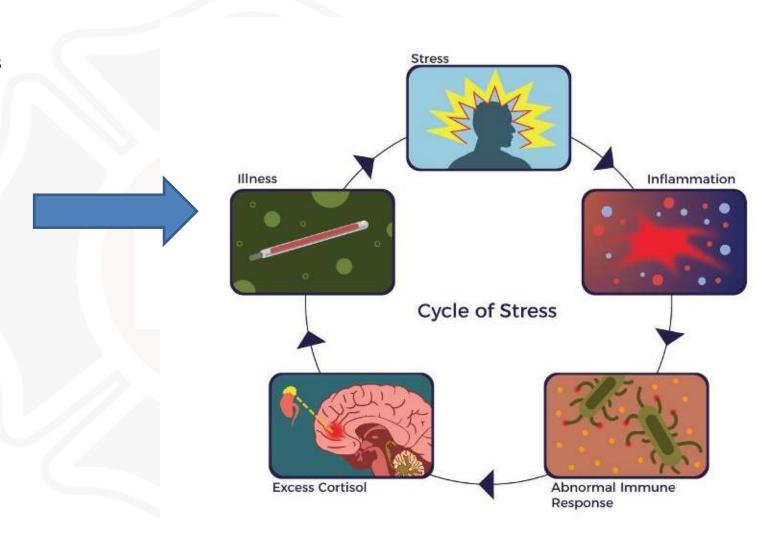

"Our minds think we respond one way, and our physiology says something different."

-Dr. Kyle Ebersole (UW Milwaukee Study on the Physiological of Emergency Response)

- Heart attacks and strokes
 - Cancer
 - High Blood Pressure
 - Substance abuse
 - Obesity, diabetes
- Low T (low testosterone)
 - Sleep apnea
 - PTSD
 - Mental Health
 - Depression
- Musculoskeletal Injury
 - Suicide
 - Digestive issues
 - Memory loss
 - Relationship Issue

"The expectation that <u>we</u> can be immersed in suffering and loss and not be touched by it is as unrealistic as expecting to be able to walk though water without getting wet."

-Captain Frank Leto - FDNY

- Drugs
- Alcohol
 - Anger
- Eating
- WE DON'T?

How do we cope?

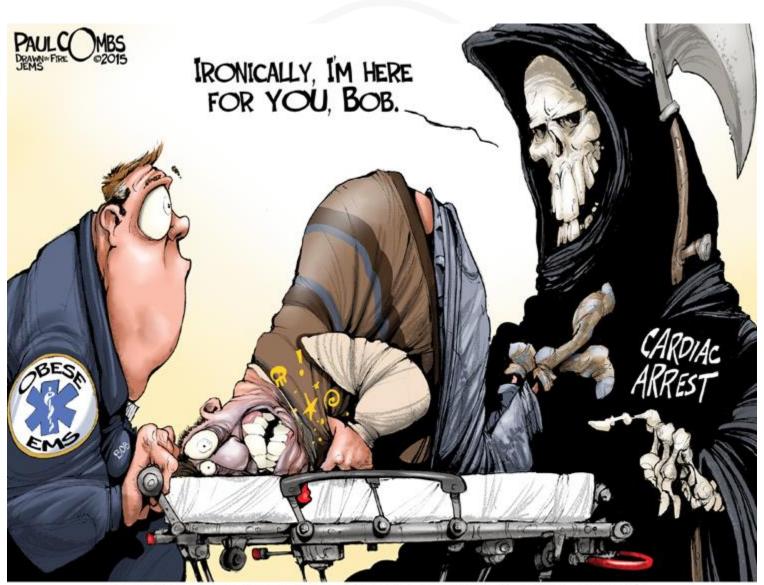

I used to work in a fire hydrant factory. You couldn't park anywhere near the place.

Compliments of Comedian Steven Wright

GET FIT AND STAY FIT, SO YOU CAN BE THERE TO SAVE OTHERS!

TAKE CARE OF YOURSELF, SO YOU CAN TAKE CARE OF THEM.

What is Inflammation?

- Inflammation refers to your body's process of fighting against things that harm it, such as infections, injuries, and toxins (poor nutrition), and STRESS.
- Cortisol is produced to regulate the inflammatory and immune response
- Prolonged stress leads to hyper-physiological levels of cortisol and alters its effectiveness.
- The chronic state of inflammation can lead to numerous health problems, including heart disease, arthritis, <u>depression</u>, Alzheimer's disease, <u>PTSD</u> and even cancer (Segerstrom, 2006).

Nutrition and Inflammation (the bad news).

• Diets that promote inflammation are high in refined starches, sugar, saturated and trans-fats, and low in omega-3 fatty acids, natural antioxidants and fiber from fruits, vegetables, and whole grains (Giugliano et al.).

 Eating toxins cause an inflammatory response in the body.

Uncontrolled Inflammation

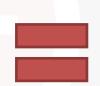

How to Control Stress/Inflammation-Fitness.

One moderate exercise session has a cellular response that may help suppress inflammation in the body.**

- Injury Reduction/Performance Improvement
 - Weight control
 - Lower instances of Cancer
- Decrease chances of sudden heart attack and stoke.
 - Improves cognitive thinking
- Improves mental health (lowers symptoms of depression)
 - Helps manage PTSD
 - Improves Cognitive Thinking
 - Improves immune response (COVID)

** Brain, Behavior, and Immunity Volume 61, March 2017, Pages 60-68

The Proof (Exercise is Good)

Exercise and Depression

Studies show that exercise can treat mild to moderate depression as effectively as antidepressant medication—but without the side-effects, of course. As one example, a recent study done by the Harvard T.H. Chan School of Public Health found that running for 15 minutes a day or walking for an hour reduces the risk of major depression by 26

Exercise and PTSD/ trauma

Evidence suggests that by really focusing on your body and how it feels as you exercise, you can actually help your nervous system become "unstuck" and begin to move out of the immobilization stress response that characterizes PTSD or trauma

Exercise and Injury Reduction

There is limited evidence to suggest that firefighters that exercise regularly are less likely to experience injuries while on duty. But there is strong evidence to support those injured have a much better chance of full and shortened recovery from injury.

Exercise and Reduction of Sudden Cardiac Arrest

Regular exercise may significantly minimize this small transient risk and may lower the overall long-term risk of sudden cardiac death. Regular exercise has numerous cardiovascular benefits and has been associated with improved cardiovascular and all-cause mortality.

The Proof (continued)

Exercise and Cancer

Staying active can help you lower your risk of many types of cancer including breast, colorectal and uterine cancers. Exercise lowers your cancer risk in several ways: Exercise helps you maintain a healthy weight. Being overweight or obese raises your risk for several cancers.

Exercise and Resilience.

When faced with mental or emotional challenges in life, exercise can help you build resilience and cope in a healthy way, instead of resorting to alcohol, drugs, or other negative behaviors that ultimately only make your symptoms worse. Regular exercise can also help boost your immune system and reduce the impact of stress.

Exercise and Cognitive Thinking.

Exercise can help boost thinking and memory indirectly by improving one's mood and reducing stress, depression, and anxiety. Exercise has been shown to decrease feelings of depression, anxiety, and stress which leads to better decision making (especially under stress).

Nutrition and Inflammation (the good news).

- Research shows that one of the best ways to reduce inflammation lies not in the medicine cabinet, but in the refrigerator...
- To reduce levels of inflammation, aim for an overall healthy diet.

Nutrition and Inflammation.

What is Resilience?

It refers to a person's ability to withstand, adapt to, and recover from adversity and stressful situations.

Individual resilience involves behaviors, thoughts, and actions that promote personal wellbeing and mental health.

WE ALL MUST REALIZE THIS...

- Step 1- Get Moving
 - Exercise at least 3 times per week for 30-45
 - minutes
 - Mobility exercises (at least 5 minutes)
 - Stretch and foam roll
 - Include full-body strength exercises
 - Include core movements -plank
 - Cardiovascular exercise
 - Long slow cardio
 - Intervals

Squat to Press

- Step 2- Eat to Perform.
 - Drink at least 80 ounces of water a day!
 - Eat real food
 - Limit sugar and processed "junk" food
 - Eat your fruits and veggies
 - Your Mom was right!
 - Have some healthy fats
 - Focus on healthy fats (nuts, olive oil, avocado)

- Step 3 Mind your Business...
 - Incorporate 10-minutes of "quiet time" each shift.
 - Yoga
 - Stretch
 - Meditate
 - Use an app (calm)
 - Focus on taking deep breaths
 - Give it a try!
 - New research shows that even small bouts of "mindfulness" exercises 3x a week can be VERY beneficial!

Control your Heart Rate...

Strong Body, Strong Mind Workout Plan						
Sunday (on shift)	Monday	Tuesday	Wednesday (on shift)	Thursday	Friday	Saturday (on shift)
OFF	Full-body Strength	Light jog, bike or walk with	Crew Interval Workout	OFF	Full-body Strength	Yoga and stretching
Deep breathing	Workout	10 minutes of stretching/yoga	(slams, crawls, stairs, plank, carry, drag)		Workout + 10 minutes of intervals	
			Deep breathing			

Daily Nutrition Goals

- -At least 80 ounces of water
- -Limit Sugars (added sugars 40 grams or less)
- -Eat lean protein, veggies and fruit at each meal (4x/day)
- -Have some healthy fats (almonds, avocado)

Now is the time to make a positive change in our industry.

Eat right, exercise, hydrate and set an example for the community.

Stay Safe and FRF
-Aaron Zamzow
